Chapter 1. Introduction

Thank you for choosing NOVA-EDEN/C3 embedded board. NOVA-EDEN/C3 is an 5"1/4 form factor CPU board equipped with a low power consumption and high performance VIA EDEN/C3 processor. It is designed for system manufacturers, integrators, or VARs who want to provide quality and reliable CPU board at a reasonable price.

NOVA-EDEN/C3 has a built-in the ProSavage4 AGP4X VGA controller. It is a 2D/3D graphics controller, which provides resolution up to 1920x1440, and supports both CRT and LCD. The VGA controller can share 8-32MB frame buffer of system memory.

For applications requiring a high speed serial transmission, NOVA-EDEN/C3 provides both USB 1.1 and USB 2.0. The high speed USB 2.0 host controller implements an ECHI interface that provides 480Mb/s bandwidth.

Both on-chip UARTs are compatible with the NS16C550. The parallel port and IDE interface are compatible with IBM PC/AT architecture.

NOVA-EDEN/C3 also has a built-in 10/100 Fast Ethernet LAN, which is a fully integrated 10BASE-T/100BASE-TX LAN controller with high performance and low power consumption features.

NOVA-EDEN/C3 uses the advanced VIA VT8606/VT82C686B Chipsets which is 100% software compatible chipset with PCI 2.2 standard.

1.1 Specifications

CPU	VIA EDEN/C3 processor, supports 133 MHz FSB
Bus interface	PCI/ISA bus
Bus speed	ISA: 8MHz, PCI: 33MHz
DMA channels	7
Interrupt levels	15
Chipset	VT8606
Real-time clock/calendar	VT82C686B
Main memory	<ul style="list-style-type: none">✓ One 168-pin DIMM socket supports 133Mhz SDRAM.✓ The maximum memory is up to 512MB.
Ultra DMA 100 IDE interface	<ul style="list-style-type: none">✓ Up to four PCI Enhanced IDE hard drives are supported.✓ The Ultra DMA 100 IDE can handle data transfer up to 100MB/s.✓ Compatible with existing ATA IDE specifications is the best advantage this board has, so there is no need to do any changes to users' current accessories.

Floppy disk drive interface	Supports up to two floppy disk drives, 5.25" (360KB and 1.2MB) and/or 3.5" (720KB, 1.44MB, and 2.88MB).
Serial ports	<ul style="list-style-type: none"> ✓ Four RS-232 ports with 16C550 UART (or compatible) with 16-byte FIFO buffer. ✓ Support up to 115.2Kbps. ✓ The ports can be individually configured to COM1, COM2, COM3, COM4 or disabled.
Bi-directional parallel port	<ul style="list-style-type: none"> ✓ Configurable to LPT1, LPT2, LPT3 or disabled. ✓ Supports EPP/ECP/SPP.
Hardware monitor	Built-in to monitor power supply voltage and fan speed status.
IrDA port	<ul style="list-style-type: none"> ✓ Supports Serial Infrared(SIR) and Amplitude Shift Keyed IR(ASKIR) interface.
USB 2.0/1.1 port	Supports 4 USB2.0 and 2 USB1.1 ports for future expansion.
Watchdog timer	<ul style="list-style-type: none"> ✓ Software programmable, reset generated when watchdog timer is time-out. ✓ Can use I/O Port hex 043(843) & 443 to control the watchdog.
VGA controller	<ul style="list-style-type: none"> ✓ Built-in ProSavage4 AGP4X 256-bit 2D/3D graphics engine. ✓ 8-32MB share Memory. ✓ Screen Resolution: up to 1920x1440.
Ethernet	<ul style="list-style-type: none"> ✓ Fast Ethernet controllers, IEEE 802.3u Auto-Negotiation supports 10BASE-T/100BASE-TX standard. ✓ The RJ45 connectors are located on the mounting bracket for easy connection.
Keyboard and PS/2 mouse connector	<ul style="list-style-type: none"> ✓ A 6-pin mini DIN connector is located on the mounting bracket for easy connection to a keyboard or PS/2 mouse. ✓ For alternative application, a keyboard and a PS/2 mouse pin header connector are also available on board.
Audio	AC'97 Audio CODEC
Compactflash	It can be used with a passive adapter (True IDE Mode) in a Type I/II Socket.
Expansion bus	PC/104-Plus compatible
Power consumption	(VIA EDEN/C3, PC133 SDRAM) +5V @ 3.6A , +12V @ 500mA Recommended: 350-watt power supply or higher
Operating temperature	0°-60° C

1.2 Package Contents

NOVA-EDEN/C3's package includes the following items:

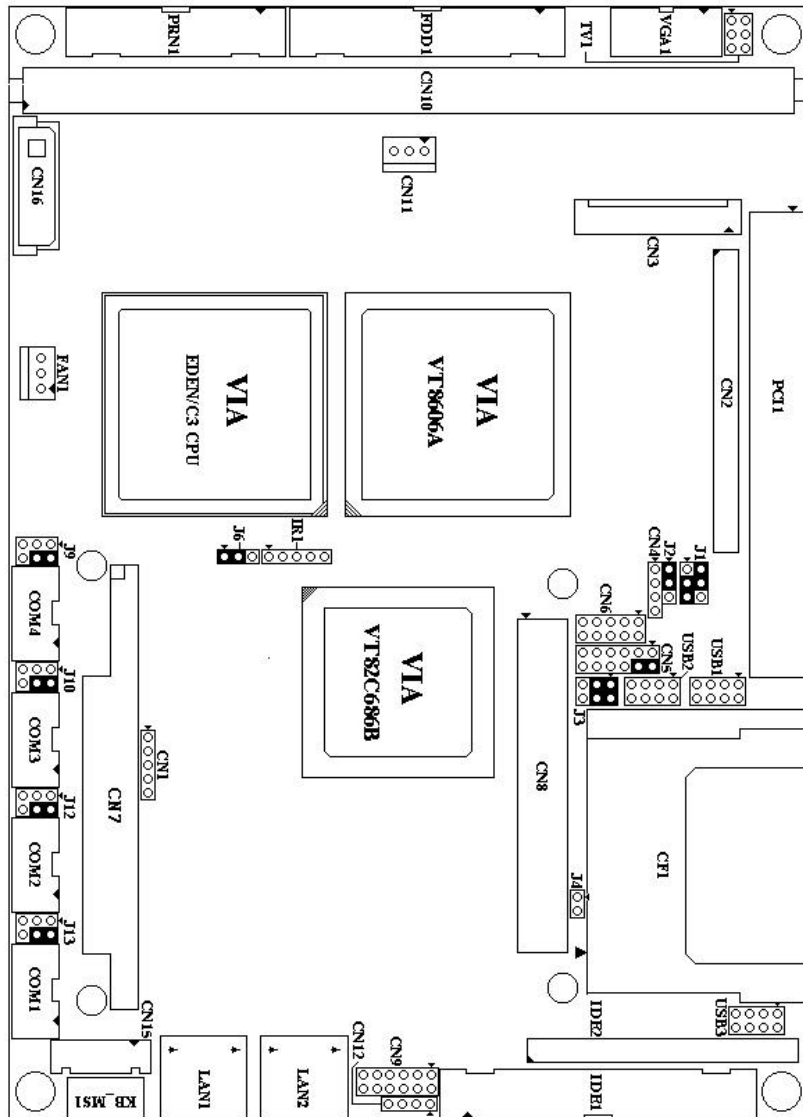

- User Manual
- NOVA-EDEN/C3 Embedded Board
- Four RS-232 cables
- One Parallel port cable
- One FDD cable
- Two ATA IDE cables
- One Audio cable
- One USB cable
- One VGA cable
- Keyboard and mouse Y-Adapter cable.
- One Driver CD

If any of these items is missing or damaged, contact the dealer from whom you purchased this product immediately. Save the shipping materials and carton in case you want to ship or store the product in the future.

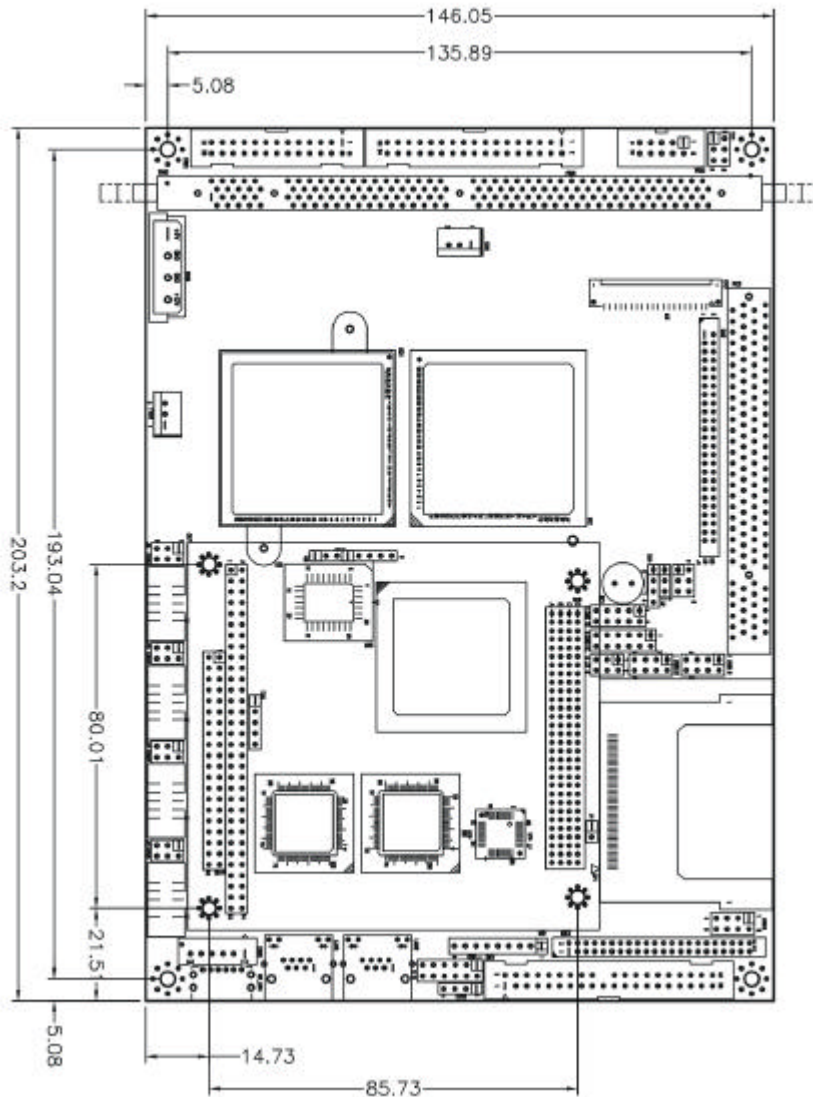

Chapter 2. Installation

This chapter describes how to install NOVA-EDEN/C3. Follow the unpacking information carefully and refer to the following diagram of NOVA-EDEN/C3 when necessary.

2.1 NOVA-EDEN/C3 Layout

2.2 NOVA-EDEN/C3 Dimensions (Unit: mm)

2.3 Unpacking Precautions

Some components of NOVA-EDEN/C3 are very sensitive to static electricity and can be damaged by a sudden rush of power. To protect it from unintended damage, be sure to follow these precautions:

- Ground yourself to remove any static charge before touching NOVA-EDEN/C3. You can do it by using a wrist strap connected to the ground or by frequently touching any conducting materials connected to the ground.
- Handle your NOVA-EDEN/C3 by its edges. Do not touch IC chips, leads or circuitry.
- Do not plug any connector or jumper when the power is on.

2.4 Clear CMOS Setup

To clear the CMOS Setup (for example, if you have forgotten the password, you should clear the CMOS and then re-set the password), you have to close the J6 (2-3) for about 3 seconds, then open it. This will put the system back to normal operation mode.

- **J6 : Clear CMOS Setup**

J6	Description
1-2 (default)*	Keep CMOS Setup (Normal Operation)
Short 2-3	Clear CMOS Setup

**Note: All shaded rows in the tables of this manual are the default settings for the NOVA-EDEN/C3.*

2.5 Buzzer Function Setting

- **CN5(2-4): Enabled/Disabled Onboard Buzzer Function**

2 - 4	Description
SHORT *	Enabled
OPEN	Disabled

2.6 COM2 RS-232 /422/485 Mode Selection

- **J2 : COM2 Mode Selection**

J2	Description
1-2 Short	RS232
2-3 Short	RS422/485

Caution: If RS422/485 is in use, the RS232 mode on the main board will be disabled.

2.7 TFT LCD Setting

- J1: TFT LCD type (5V / 3V & FPCLK / #FPCLK) Setting

J1	Description
2 - 4	3V TFT LCD
3 - 5	FPCLK
4 - 6	5V TFT LCD
1 - 3	#FPCLK

2.8 PCI Slot VIO Voltage Setting

- J3: VIO Voltage (5V / 3V) Setting

J3	Description
1 - 3	5VIO
2 - 4	5VIO
3 - 5	3VIO
4 - 6	3VIO

2.9 COM1, COM2, COM3, COM4 RI Function Setting

- J9, J10, J12, J13 : RI Function Setting

Short 2 - 4 pin, normal RS232 RI Function

Short 4 - 6, 1 - 3 pin, RI is 5V output

Short 4 - 6, 3 - 5 pin, RI is 12V output

J9, J10, J12, J13	Description
2 - 4	Normal RI Function
1 - 3 4 - 6	RI is 5 Voltage output
3 - 5 4 - 6	RI is 12 Voltage output

2.10 Compact Flash Master/Slave Function Setting

- **J4 : Compact Flash Master/Slave Function Setting**

Short 1 - 2 pin, Compact Flash is Master

J4	Description
Close	Master
Open	Slave

Chapter 3. Connection

This chapter describes how to connect peripherals, switches and indicators to the NOVA-EDEN/C3 board.

3.1 Audio Connectors

The onboard AC'97 CODEC supports several audio functions. The audio connectors are described below.

- **CN9 :Audio connector
(Speaker out, Line out, Line in, MIC in)**

PIN	Description	PIN	Description
1	Speaker out (Left)	2	Speaker Out (Right)
3	GROUND	4	GROUND
5	Line Out (Left)	6	Line Out (Right)
7	Line In (Left)	8	Line In (Right)
9	GROUND	10	GROUND
11	MIC In	12	GROUND

- **CN12:Audio CD In connector**

PIN	Description
1	CD SIGNAL (LEFT)
2	GROUND
3	GROUND
4	CD SIGNAL (RIGHT)

3.2 PCI E-IDE Disk Drive Connector

You can attach up to four IDE (Integrated Device Electronics) devices.

IDE1 : Primary IDE Connector (40pin 2.54mm)

IDE2 : Secondary IDE Connector (44pin 2.0mm)

- **IDE1 & IDE2 : IDE Interface Connector**

PIN	Description	PIN	Description
1	RESET#	2	GROUND
3	DATA 7	4	DATA 8
5	DATA 6	6	DATA 9
7	DATA 5	8	DATA 10
9	DATA 4	10	DATA 11
11	DATA 3	12	DATA 12
13	DATA 2	14	DATA 13
15	DATA 1	16	DATA 14
17	DATA 0	18	DATA 15
19	GROUND	20	N/C
21	DRQ	22	GROUND

23	IOW#	24	GROUND
25	IOR#	26	GROUND
27	CHRDY	28	REV. PULL LOW
29	DACK	30	GROUND-DEFAULT
31	INTERRUPT	32	N/C
33	SA1	34	N/C
35	SA0	36	SA2
37	HDC CS0#	38	HDC CS1#
39	HDD ACTIVE#	40	GROUND
41	+5V(IDE2)	42	+5V(IDE2)
43	GND(IDE2)	44	N/C(IDE2)

3.3 Parallel Port

Usually, a printer is connected to the parallel port. NOVA-EDEN/C3 includes an on-board parallel port, accessed via a 26-pin flat-cable.

- **PRN1 : Parallel Port Connector**

PIN	Description	PIN	Description
1	STROBE#	2	DATA 0
3	DATA 1	4	DATA 2
5	DATA 3	6	DATA 4
7	DATA 5	8	DATA 6
9	DATA 7	10	ACKNOWLEDGE
11	BUSY	12	PAPER EMPTY
13	PRINTER SELECT	14	AUTO FORM FEED #
15	ERROR#	16	INITIALIZE
17	PRINTER SELECT LN#	18	GROUND
19	GROUND	20	GROUND
21	GROUND	22	GROUND
23	GROUND	24	GROUND
25	GROUND	26	NC

3.4 USB Port Connectors

NOVA-EDEN/C3 is equipped with two USB 2.0 ports with high bandwidth (480Mbps) and is backward compatible with USB1.1.

- **USB1, USB2: USB 2.0 Connector (2 ports each)**

PIN	Description	PIN	Description
1.	VCC	8.	GROUND
2.	DATA0-	7.	DATA1+
3.	DATA0+	6.	DATA1-
4.	GROUND	5.	VCC

NOVA-EDEN/C3 is also equipped with two USB 1.1 ports.

- **USB3: USB 1.1 Connector (2 ports)**

PIN	Description	PIN	Description
1.	VCC	8.	GROUND
2.	DATA0-	7.	DATA1+
3.	DATA0+	6.	DATA1-
4.	GROUND	5.	VCC

3.5 Serial Port

NOVA-EDEN/C3 offers four high speed NS16C550 compatible UART's with 16-byte Read/Receive FIFO serial ports.

- **COM1, COM2, COM3, COM4: Serial Port Connector**

PIN	Description
1	DATA CARRIER DETECT (DCD)
2	RECEIVE DATA (RXD)
3	TRANSMIT DATA (TXD)
4	DATA TERMINAL READY (DTR)
5	GROUND (GND)
6	DATA SET READY (DSR)
7	REQUEST TO SEND (RTS)
8	CLEAR TO SEND (CTS)
9	RING INDICATOR (RI)

3.6 Keyboard/Mouse Connector

NOVA-EDEN/C3 has a 6-pin DIN keyboard/mouse connector and a 5-pin keyboard connector.

- **KB_MS1: Mini DIN Keyboard/Mouse Connector**

PIN	Description
1	KEYBOARD DATA
2	MOUSE DATA
3	GROUND
4	+5V
5	KEYBOARD CLOCK
6	MOUSE CLOCK

- **CN15: 6-pin Keyboard/Mouse Connector**

PIN	Description
1	+5V
2	MOUSE DATA
3	MOUSE CLOCK
4	KEYBOARD DATA
5	KEYBOARD CLOCK
6	GROUND

3.7 IrDA Infrared Interface Port

NOVA-EDEN/C3 comes with an integrated IrDA port which supports either a Serial Infrared(SIR) or an Amplitude Shift Keyed IR(ASKIR) interface.

- **IR1: IrDA connector**

PIN	Description
1	VCC
2	IR-RX2
3	IR-RX
4	Ground
5	IR-TX

3.8 Fan Connector

NOVA-EDEN/C3 also has a CPU cooling fan connector, which can supply 12V/500mA to the fan. There is a rotation pin in the fan connector, which transfers the fan's rotation signal to the system BIOS in order to recognize the fan speed. Please note that only specific fans offer a rotation signal.

- **FAN1: CPU Fan Connector**

PIN	Description
1	Rotation Signal
2	+12V
3	Ground

3.9 VGA Connector

- **VGA1: 10-pin VGA Connector**

PIN	Description	PIN	Description
1	RED	6	DDCCLK
2	GREEN	7	DDCDAT
3	BLUE	8	GROUND
4	HSYNC	9	GROUND
5	VSYNC	10	GROUND

3.10 TV OUT Connector

NOVA-EDEN/C3 supports both NTSC and PAL signal on the TV-out.

- **TV1: 6-pin TV-OUT Connector**

PIN	Description	PIN	Description
1	GROUND	2	TV_Y
3	GROUND	4	TV_C
5	GROUND	6	TV_CVBS

3.11 Digital I/O Connector

The digital IO port of NOVA-EDEN/C3 is 5V CMOS level. Internal pull-up are existed on the output.

- **CN6: 10-pin Digital I/O Connector**
(Please refer to Appendix D for used digital I/O function)

PIN	Description	PIN	Description
1	GROUND	2	+5V
3	INPUT1	4	OUTPUT1
5	INPUT2	6	OUTPUT2
7	INPUT3	8	OUTPUT3
9	INPUT4	10	OUTPUT4

3.12 Power Connector

NOVA-EDEN/C3 is equipped with one standard power connector.

- **CN16 : 4-pin Connector**

PIN	Description
1	+5V
2	GND
3	GND
4	+12V

3.13 External Switches and Indicators

There are several external switches and indicators for monitoring and controlling your CPU board. All functions are in the CN5 connector.

- **CN5: Pin Assignment and Functions**

FUNCTION	PIN	Description	
SPEAKER	2	SPK SIGNAL	Jump for Buzzer
	4	Buzzer-	
	6	NC	
	8	VCC	
RESET	10	RESET	
	12	GROUND	
HDD LED	9	IDE_LED+	
	11	IDE_LED-	
POWER LED	1	LED+	
	3	LED-(GROUND)	
POWER BUTTON	5	GROUND	
	7	PSON	

3.14 PS-ON Connector

This connector is used to control the ATX power supply.

- **CN11: PS-ON Connector**
(Please refer to Appendix F for used ATX power supply)

PIN	Description
1	+5V Standby
2	PS-ON
3	Ground

3.15 LAN Connector

NOVA-EDEN/C3 is equipped with 10/100Mbps Ethernet controllers, which are connected to the LAN via an RJ45 connector. The pin assignments are as follows.

- **LAN1, LAN2: RJ45 Connectors (10/100M)**

PIN	Description	PIN	Description
1	TX+	7	N/C
2	TX-	8	N/C
3	RX+	9	Speed +
4	N/C	10	Speed -
5	N/C	11	Active/LINK +
6	RX-	12	Active/LINK -

3.16 RS422 / 485 Connector

The RS485 port of NOVA-EDEN/C3 is half-duplex with auto direction. So you do not have to switch transfer mode while sending or receiving data.

- **CN4: RS 422 / 485 Connector**

PIN	Description
1	TX+
2	TX-
3	RX+
4	RX-

3.17 TFT LCD Connector

NOVA-EDEN/C3 is equipped with TFT LCD controller, which can be connected to the LCD via CN2 connector. The pin assignments are as follows.

- **CN2: TFT LCD Connector**

PIN	Description	PIN	Description
1	N/C	2	FP33
3	FP34	4	FP31
5	FP35	6	FP32
7	FP30	8	FP28
9	FP29	10	FP27
11	FP25	12	FP26
13	FP24	14	FP21
15	FP23	16	FP22

43	ENVDD	44	FPVS
45	ENVEE	46	FPHS
47	GND	48	GND
49	+12V	50	+12V

3.18 LCD Connector

NOVA-EDEN/C3 can support 1 or 2 channel (18 or 36bit) LVDS panel, which can be connected to CN3. The pin assignments are as follows.

• **CN3: LVDS LCD Connector**

PIN	Description	PIN	Description
1	2 nd LVDS clock output +	2	2nd LVDS clock output -
3	2 nd LVDS data2 output +	4	2nd LVDS data2 output -
5	2 nd LVDS data1 output +	6	2nd LVDS data1 output -
7	2 nd LVDS data0 output +	8	2nd LVDS data0 output -
9	1st LVDS clock output +	10	1st LVDS clock output -
11	1st LVDS data2 output +	12	1st LVDS data2 output -
13	1st LVDS data1 output +	14	1st LVDS data1 output -
15	1st LVDS data0 output +	16	1st LVDS data0 output -
17	GROUND	18	GROUND
19	+LCD (+3Vor +5V)	20	+LCD (+3Vor +5V)

Please refer to Appendix E for the signal mapping of LVDS.

3.19 PCI Slot

• **PCI 1: PCI Slot**

3.20 PC/104-Plus Connector

NOVA-EDEN/C3 has a PC/104-Plus connector for both PC/104-Plus and PC/104 modules. The PCI bus of PC/104-Plus is a 32-bit bus running at 33MHz, and it is PCI2.1 compliant.

- **CN8: PC/104-Plus PCI Connector (120-pin PCI bus)**

Chapter 4. AMI BIOS Setup

4.1 Introduction

This part of the manual discusses AMI Setup program built into the ROM BIOS. The Setup program allows users to modify basic system configurations. This special information is then stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

4.2 Starting Setup

The AMI BIOS is immediately activated when you first power on the computer. The BIOS reads the system information contained in the CMOS and begins the process of checking the system and configuring it. When it finishes, the BIOS will seek an operating system on one of the disks and then launch and turn control over to the operating system.

While the BIOS is in control, the Setup program can be activated in one of two ways:

1. By pressing immediately after switching the system on, or
2. By pressing the key when the following message appears briefly at the bottom of the screen during the POST.

Press DEL to enter SETUP.

If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON again or simply by pressing the "RESET" button on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt>, and <Delete> keys. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to...

PRESS F2 TO CONTINUE, DEL TO ENTER SETUP

4.3 Using Setup

In general, you use the arrow keys to highlight items, press <Enter> to select, use the PageUp and PageDown keys to change entries, press <F1> for help and press <Esc> to quit. The following table provides more detail on how to navigate in the Setup program using the keyboard.

Up arrow	Move to previous item
Down arrow	Move to next item
Left arrow	Move to the item in the left hand
Right arrow	Move to the item in the right hand

Esc key	Main Menu -- Quit and not save changes into CMOS Status Page Setup Menu and Option Page Setup Menu -- Exit current page and return to Main Menu
PgUp key	Increase the numeric value or make changes
PgDn key	Decrease the numeric value or make changes
+ key	Increase the numeric value or make changes
- key	Decrease the numeric value or make changes
F1 key	General help, only for Status Page Setup Menu and Option Page Setup Menu
F2 /F3 key	Change color from total 16 colors. F2 to select color forward, (Shift) F2 to select color backward
F4 key	Reserved
F5 key	Reserved
F6 key	Reserved
F7 key	Reserved
F8 key	Reserved
F9 key	Reserved
F10 key	Save all the CMOS changes, only for Main Menu

4.4 Getting Help

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc> or F1 key again.

If after making and saving system changes with Setup, you discover that your computer no longer able to boot, the AMI BIOS supports an override to the CMOS settings which resets your system to its default values.

The best advice is to only alter settings which you thoroughly understand. To this end, we strongly recommend that you avoid making any changes to the chipset defaults. These defaults have been carefully chosen by both AMI and your systems manufacturer to provide the absolute maximum performance and reliability. Even a seemingly small change to the chipset setup has the potential leading you to use the override.

4.5 Main Menu

Once you enter the AMIBIOS™ CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions and two exit choices. Use the arrow keys to select among the items and press <Enter> to accept and enter the sub-menu.

Note that a brief description of each highlighted selection appears at the bottom of the screen. The main menu includes the following main setup categories. Some systems may not include all entries.

Field	Description
Standard CMOS Setup	Use this menu for basic system configuration.
Advanced CMOS Setup	Use this menu to set the Advanced Features available on your system.
Advanced Chipset Setup	Use this menu to change the values in the chipset registers and optimize your system's performance.
Power Management Setup	When Disabled, SMI will not be initialized, and complete power management functionality is removed until this option is set to Enabled.
PCI / Plug and Play Setup	This entry appears if your system supports PnP / PCI.
Peripheral Setup	Use this menu to specify your settings for integrated peripherals.
Hardware Monitor Setup	Use this menu to monitor your hardware.
Auto-detect Hard Disks	Use this menu to specify your settings for hard disks control.
Change Supervisor Password	Use this menu to set User and Supervisor Passwords.
Auto Configuration with Optimal Settings	Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AMI has designed the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.
Auto Configuration with Fail-Safe Settings	Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.
Save Settings and Exit	Save CMOS value changes to CMOS and exit setup.
Exit Without Saving	Abandon all CMOS value changes and exit setup.

4.6 Standard CMOS Setup

The items in Standard CMOS Setup Menu are divided into 10 categories. Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want in each item.

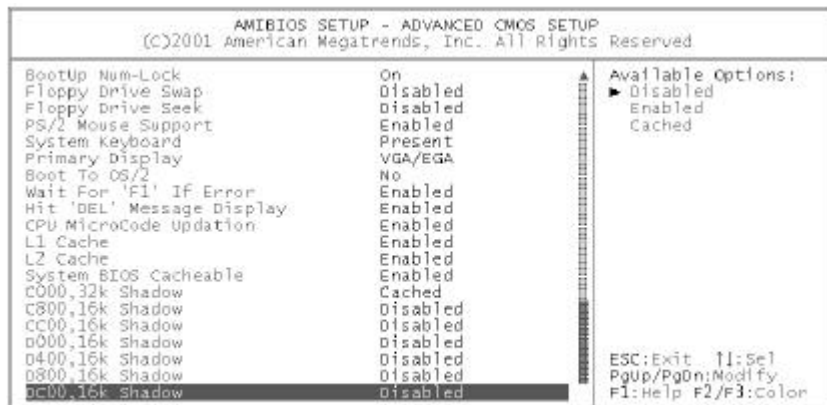

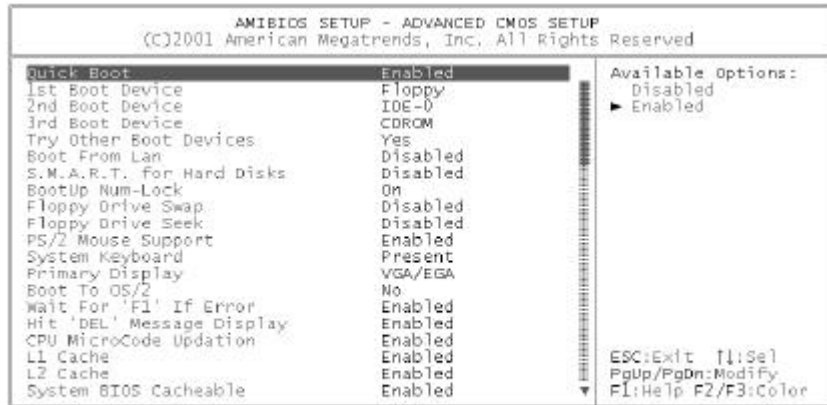

AMIBIOS SETUP - STANDARD CMOS SETUP			
(C)2001 American Megatrends, Inc. All Rights Reserved			
Date (mm/dd/yyyy):	Fri Nov 01, 2002	Base Memory:	0 KB

● Main Menu Selections

Item	Options	Description
Date	MM DD YYYY	Set the system date
Time	HH : MM : SS	Set the system time
IDE Primary Master	Options are in its sub menu (described in Table 3)	Press <Enter> to enter the sub menu of detailed options
IDE Primary Slave	Options are in its sub menu (described in Table 3)	Press <Enter> to enter the sub menu of detailed options
IDE Secondary Master	Options are in its sub menu (described in Table 3)	Press <Enter> to enter the sub menu of detailed options
IDE Secondary Master	Options are in its sub menu (described in Table 3)	Press <Enter> to enter the sub menu of detailed options
Drive A Drive B	None 360K, 5.25 in 1.2M, 5.25 in 720K, 3.5 in 1.44M, 3.5 in 2.88M, 3.5 in	Select the type of floppy disk drive installed in your system
Halt On	All Errors No Errors All, but Keyboard All, but Diskette All, but Disk/Key	Select the situation in which you want the BIOS to stop the POST process and notify you
Base Memory	N/A	Displays the amount of conventional memory detected during boot up
Extended Memory	N/A	Displays the amount of extended memory detected during boot up

4.7 Advanced CMOS Setup

This section allows you to configure your system for basic operation. You have the opportunity to select the system's default speed, boot-up sequence, keyboard operation, shadowing and security.

Quick Boot

When set to enabled, DRAM testing function will disable.

1st /2nd /3rd Boot Device

This option sets the type of device for the first boot drives that the AMIBIOS attempts to boot from after AMIBIOS POST completes.

The Choice: Disabled, IDE-0, IDE-1, IDE-2, IDE-3, Floppy, ARMD-FDD, ARMD-HDD, CDROM, SCSI.

Try Other Boot Devices

Set this option to Yes to instruct AMIBIOS to attempt to boot from any other drive in the system if it cannot find a boot drive among the drives specified in the 1st Boot Device, 2nd Boot Device, 3rd Boot Device, 4th Boot Device options.

The Choice: Yes or No.

Floppy Access Control

This option specifies the read/write access that is set when booting from a floppy drive.

The Choice: Read/Write or Read-Only.

Hard Disk Access Control

This option specifies the read/write access that is set when booting from a hard disk drive.

The Choice: Read/Write or Read-Only.

S.M.A.R.T. for Hard Disks

Self-Monitoring, Analysis and Reporting Technology. This option can help BIOS to warn the user of the possible device failure and give user a chance to back up the device before actual failure happens.

The Choice: Disabled, Enabled.

Boot Up Num-Lock

When On, this option turns off Num Lock when the system is powered on so the end user can use the arrow keys on both the numeric keypad and the keyboard.

Floppy Drive Swap

Set this option to Enabled to permit drives A: and B: to be swapped.

The Choice: Enabled or Disabled.

Floppy Drive Seek

Set this option to Enabled to specify that floppy drives A: will perform a Seek operation at system boot.

The Choice: Enabled or Disabled.

PS/2 Mouse Support

When this option is enabled, BIOS support a PS/2- type mouse.

System Keyboard

This option does not specify if a keyboard is attached to the computer. Rather, it specifies if error messages are displayed if a keyboard is not attached. This option enables you to configure workstation with no keyboard.

The Choice: Absent, Present.

Primary Display

Select this option to configure the type of monitor attached to the computer.

The Choice: Monochrome, Color 40x25,Color 80x25,VGA/PGA/EGA ,or Not Install.

Password Check

This option enables the password check option every time the system boots or the end user runs Setup. If always is chosen a user password prompt appears every time the computer is tuned on. If setup is chosen, the password prompt appears if BIOS is executed.

Boot To OS/2

Set this option to Enabled if running OS/2 operating system and using more than 64MB of system memory on the motherboard.

The Choice: YES or NO.

Wait For 'F1' If Error

If this option is enabled, AMIBIOS waits for the end user to press <F1> before continuing. If this option is disabled, AMIBIOS continues the boot process without waiting for <F1> to be pressed.

The Choice: Disabled or Enabled.

Hit 'DEL' Message Display

Disabling this option prevents "Hit if you want to run Setup" from appearing when the system boots.

The Choice: Disabled or Enabled.

Internal Cache

The option enabled or disabled the internal cache memory in the processor.

External Cache

The option enables secondary cache memory. If Enabled is selected, external cache memory is enabled. If disabled is select, external cache memory is disabled.

System BIOS Cacheable

When this option is set to enabled, the System ROM area from F0000-FFFFF is copied (shadowed) to RAM for faster execution.

C000, 32k Shadow

When this option is set to enabled, the Video ROM area from C0000-C7FFF is copied (shadowed) to RAM for faster execution.

- Disabled: The contents of the video ROM are not copied to RAM.
- Cached: The contents of the video ROM area from C0000h - C7FFFh are copied from ROM to RAM and can be written to or read from cache memory.
- Enabled: The contents of the video ROM area from C0000h - C7FFFh are copied (shadowed) from ROM to RAM for faster execution.

C800, 16k Shadow

These options enable shadowing of the contents of the ROM area named in the option title. The settings are Enable Disable, Cached. The ROM area that is not used by ISA adapter cards will be allocated to PCI adapter cards.000,32k Shadow.

CC00, 16k Shadow

These options enable shadowing of the contents of the ROM area named in the option title. The settings are Enable Disable, Cached. The ROM area that is not used by ISA adapter cards will be allocated to PCI adapter cards.800,16k Shadow.

D000, 16k Shadow

These options enable shadowing of the contents of the ROM area named in the option title. The settings are Enable Disable, Cached. The ROM area that is not used by ISA adapter cards will be allocated to PCI adapter cards.C00,16k Shadow.

D400,16k Shadow

These options enable shadowing of the contents of the ROM area named in the option title. The settings are Enable Disable, Cached. The ROM area that is not used by ISA adapter cards will be allocated to PCI adapter cards.000,16k Shadow.

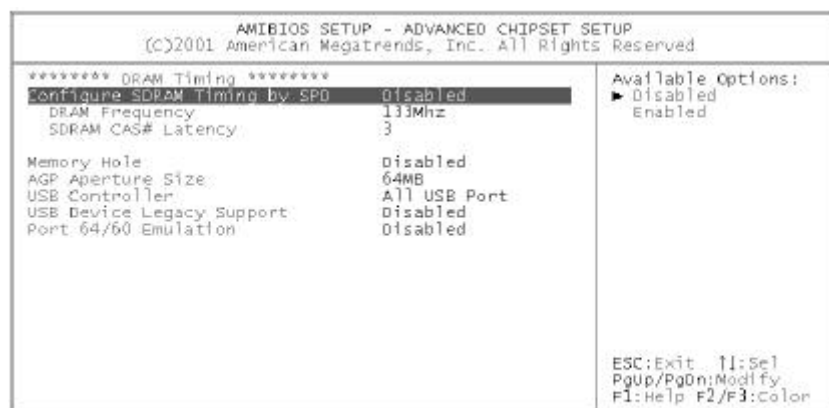

D800, 16k Shadow

These options enable shadowing of the contents of the ROM area named in the option title. The settings are Enable Disable, Cached. The ROM area that is not used by ISA adapter cards will be allocated to PCI adapter cards.400,16k Shadow.

DC00,16k Shadow

These options enable shadowing of the contents of the ROM area named in the option title. The settings are Enable Disable, Cached. ISA adapter cards will be allocated to PCI adapter cards.800,16k Shadow.

4.8 Advanced Chipset Setup

This section enables you to configure the system based on the specific features of the installed chipset. This chipset manages bus speeds and access to system memory resources, such as DRAM and the external cache. It also coordinates communications between the conventional ISA bus and the PCI bus. It must be stated that these items should never need to be

altered. The default settings have been chosen because they provide the best operating conditions for your system.

DRAM Frequency

This setting decided by Memory frequency.

SDRAM CAS# Latency

This setting decided by Memory CAS latency.

AGP Aperture Size

Select the size of AGP aperture. The aperture is a portion of the PCI Memory address space. Host cycles that hit the aperture range are forwarded to the AGP without any translation.

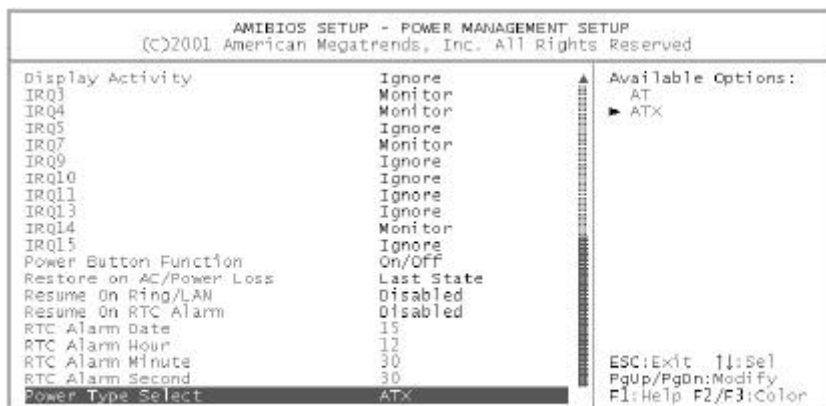

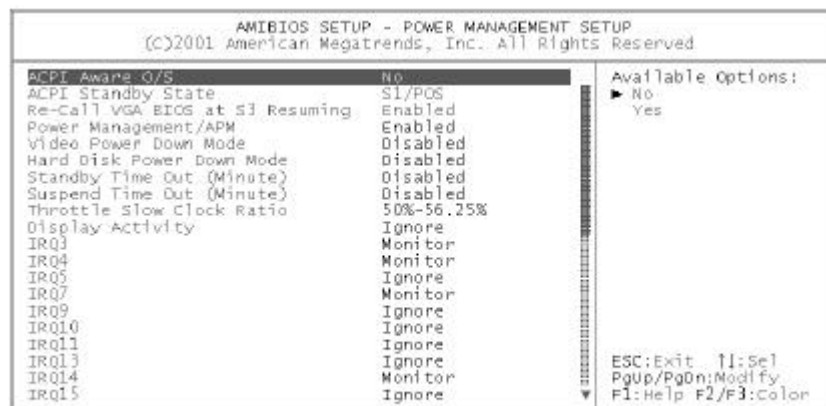

USB Controller

Select enable if your system contains a USB controller and you have USB Peripherals.

USB Device Legacy support

Enable or Disable USB device legacy support.

4.9 Power Management Setup

ACPI Aware O/S

This feature is switch of ACPI function.

Configuration options: [Yes]; [No].

ACPI Standby State

This feature is switch of STR (S3) or POS (S1) function.

Configuration options: [S3/STR] [S1/POS].

Power Management/APM

When Disabled, SMI will not be initialized, and complete power management functionality is removed until this option is set to Enabled.

Video Power Down Mode

Video power down when system is in Suspend mode.

Video power down when system is in Standby mode.

Hard Disk Power Down Mode

Hard Disk power down when system is in Suspend mode.

Hard Disk power down when system is in Standby mode.

Suspend Time Out

If no activity occurs during this period, BIOS will adjust the power state of the system to the suspend low. The "Standby Time Out" period must expire first (if enabled) before this time out period begins.

IRQ3, 4, 5, 7, 9, 10, 11, 13, 14, 15

As Individual IRQ Wake Up Events.

Power Button Function

On/Off allows the system to switch off immediately the power button is pressed. Suspend allows the system to Suspend immediately the power button is pressed.

Resume on Ring/LAN

Allow the system to wake up in response to a Ring Indicator signal from external modem. Wake up on LAN enables remote booting of a PC via a network even if it is shut down.

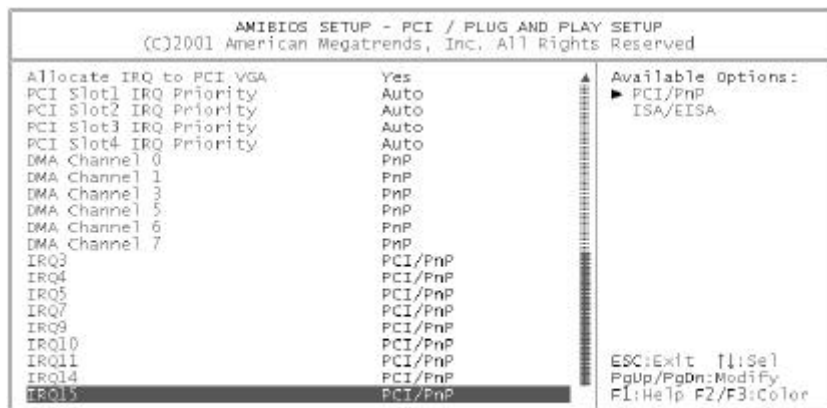

Resume On RTC Alarm

When this option is enabled, the system will turn from soft off mode according to your schedule.

Power Type Select

This option is select Power Type for AT or ATX.

4.10 PCI / Plug and Play Setup

Plug and Play Aware O/S

If enable, BIOS will configure only PnP ISA boot devices(i.e. all PnP ISA cards which has boot flag set). And PnP aware OS will configure all other devices. If disable, BIOS will configure all devices.

Clear NVRAM

When this option is set to Yes, system can auto clear NVRAM.

The Choice: Yes and No.

On Board USB2.0 Controller

This option is select enable USB2.0 controller or disable.

On Board LAN1 Controller

This option is select enable LAN1 controller or disable.

On Board LAN2 Controller

This option is select enable LAN2 controller or disable.

On Chip VGA Frame Buffer Size

This option is select frame buffer size (2~32MB) for VGA.

PCI Latency Timer (PCI Clocks)

This option specifies the latency timings(in PCI clocks) for PCI devices installed in the PCI expansion slots.

The Choice: 32, 64, 96, 128, 160 , 192, 224, or 248.

Boot Screen Select

This option is select Boot Screen from CRT or LCD or TV out. Select CRT+LCD or CRT+TV is Boot from CRT and LCD or CRT and TV.

TV out Type

If you select TV or CRT+TV from Boot screen select optional. You can select TV out type optional to select TV out type. You can select U.S. NTSC, Japanese NTSC or PAL.

LCD Panel Type

This option is select LCD Panel type.

Allocate IRQ to PCI VGA

Set this option to Yes to allocate an IRQ to the VGA device on the PCI bus. The settings are Yes or No.

PCI Slot1 / Slot2 / Slot3 / Slot4 IRQ Priority

The option specify the IRQ priority for PCI device installed in the PCI expansion slot.

The Choice: Auto, (IRQ) 3, 4, 5, 7, 9, 10, and 11, in priority order.

DMA Channel 0 , 1 , 3 , 5 , 6 , 7

The option allow you to specify the bus type used by each DMA channel.

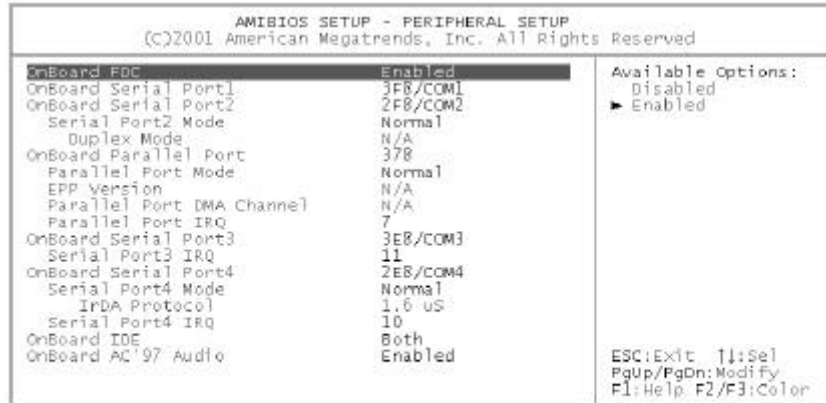

The Choice: PnP or ISA/EISA.

IRQ3 , 4 , 5 , 7 , 9 , 10 , 11 , 14 , 15

The option specify the bus that the specified IRQ line is used on. The option allow you to reserve IRQs for legacy ISA adapter cards. The option determine if AMIBIOS should remove an IRQ from the pool of available IRQs passed to devices that are configurable by the system BIOS. The available IRQ pool is determined by reading the ESCD NVRAM. If more IRQs must be removed from the pool, the end user can use the option to reserve the IRQ by assigning an ISA/EISA setting to it. Onboard I/O is configured by AMIBIOS. All IRQs used by onboard I/O are configured as PCI/PnP.

4.11 Peripheral Setup

The Peripheral Setup allows you to configure your system to most effectively save energy while operating in a manner consistent with user defined system environment.

OnBoard Serial Port 1/Port 2/Port 3/Port4

This option specifies the base I/O port address of serial port 1. The settings are Auto (AMIBIOS automatically determines the correct base I/O port address), Disabled, 3F8h, 2F8h, 2E8h, or 3E8h.

Serial Port4 Mode

This option specifies the IR active pulse or inverting clock of serial port B.

IR Pin Select

The SIN/SOUT pin of Serial Port 3 function or IRRX/IRTX pin if IR function in normal condition.

OnBoard Parallel Port

This option specifies the base I/O port address of parallel port on the motherboard.

The Choice: Disabled, 378h, 278h, or 3BCh.

Parallel Port Mode

This option specifies the parallel port mode. The settings are Normal, Bi-Dir, EPP, ECP.

- Normal: The normal parallel port mode is used.
- Bi-Dir : Use this setting to support bi-directional transfers on the parallel port.
- EPP: The parallel port can be used with devices that adhere to the Enhanced Parallel Port(EPP) specification. EPP uses the existing parallel port signals to provide asymmetric bi-directional data transfer driven by the host device.
- ECP: The parallel port can be used with devices that adhere to the Extended Capabilities Port(ECP) specification.

ECP uses the DMA protocol to achieve data transfer rates up to 2.5 Megabits per second. ECP provides symmetric bi-directional communication.

EPP Version

EPP data or address read cycle 1.9 or 1.7

Parallel Port IRQ

This option specifies the IRQ used by the parallel port.

The Choice: Auto , (IRQ)5, (IRQ)7.

Parallel Port DMA Channel

This option is only available if the setting for the Parallel Port Mode option is ECP. This option sets the DMA channel used by the parallel port.

The Choice: DMA Channel 0, 1, or 3.

On Board LAN

This option is select LAM Function Enable or Disable.

On Board LAN P.M.E

Enable or Disable P.M.E Function for LAN Wake up.

On Board AC'97 Audio

Enable or Disable AC'97 Audio Function.

4.12 Hardware Monitor Setup

4.13 Change Supervisor Password

You can set either supervisor or user password, or both of them. The differences between them are:

Supervisor Password:

Users can change the options of the setup menu.

User Password:

Users do not have the right to change the options of the setup menu. When you select this function, the following message will appear for you to create a password.

ENTER PASSWORD:

Type a password of up to eight characters in length and press Enter. Confirm the password by entering it again and press Enter. Previous password in CMOS memory will be cleared once a new password is created. To abort, press Esc. When a password is enabled, you will be prompted to enter it every time you enter Setup. This prevents an unauthorized party from changing any part of the system configuration. You can also require BIOS to request a password every time your system is rebooted. This would prevent unauthorized use of your computer. You can determine when the password is required in the BIOS Features Setup Menu and its Security option.

PASSWORD ENABLED/DISABLED:

To disable a password, press Enter when you are prompted to enter the password. Then confirm the selection. Once the password is disabled, the system will restart and you can enter Setup freely.

Appendix A: Watchdog Timer

The Watchdog Timer is a device to ensure that standalone systems can always recover from abnormal conditions that cause the system to crash. These conditions may result from an external EMI or a software bug. When the system stops working, hardware on the board will perform hardware reset (cold boot) to bring the system back to a known state.

Three I/O ports control the operation of Watchdog Timer.

443 (hex)	Write	Set Watchdog Time period
443 (hex)	Read	Enable the Watchdog Timer
043/843 (hex)	Read	Disable the Watchdog Timer

Prior to enable the Watchdog Timer, user has to set the time-out period. The resolution of the timer is 1 second and the range of the timer is from 1 sec to 255 sec. You need to send the time-out value to the I/O port-443H, and then enable it by reading data from the same I/O port-443H. This will activate the timer that will eventually time out and reset the CPU board. To ensure that this reset condition will not occur, the Watchdog Timer must be periodically refreshed by reading the same I/O port 443H. This must be done within the time-out period that is set by the software, please refer to the example program. Finally, we have to disable the Watchdog timer by reading the I/O port- 843H or 043H. Otherwise the system could reset unconditionally.

Note: A tolerance of at least 5% must be maintained to avoid unknown routines in the operating system (DOS), such as disk I/O that can be very time-consuming. For example, if the time-out period has been set to 10 seconds, the I/O port 443H must be read within 7 seconds.

Example assembly program:

```
TIMER_PORT = 443H
TIMER_START = 443H
TIMER_STOP = 843H
;;INITIAL TIMER COUNTER
MOV DX, TIMER_PORT
MOV AL, 8 ;;8 seconds
OUT DX, AL
MOV DX, TIMER_START
IN AL, DX. ;;START COUNTER
W_LOOP:
MOV DX, TIMER_STOP
IN AL, DX
MOV DX, TIMER_START
IN AL, DX ;;RESTART COUNTER
;;ADD YOUR APPLICATION HERE
CMP EXIT_AP, 0
JNE W_LOOP
MOV DX, TIMER_STOP
IN AL, DX
;;EXIT AP
```

Appendix B: I/O Address Map

- I/O Address Map

I/O Address Map	Description
000-01F	DMA Controller #1
020-021	Interrupt Controller # 1, Master
040-05F	System Timer
060-06F	Standard 101/102 keyboard Controller
070-07F	Real time Clock, NMI Controller
080-0BF	DMA Page Register
0A0-0BF	Interrupt Controller # 2
0C0-0DF	DMA Controller # 2
0F0-0F0	Clear Math Coprocessor Busy
0F1-0F1	Reset Math Coprocessor
0F8-0FF	Math Coprocessor
170-1F7	BUS Master PCI IDE Controller
278-27F	Parallel Printer Port 2
2E8-2EF	Serial Port 4
2F8-2FF	Serial Port 2
376-376	BUS Master PCI IDE Controller
378-37F	Parallel Printer Port 1
3B0-3DF	AGP Graphic Adapter
3E8-3EF	Serial Port 3
3F0-3F7	Floppy Disk Controller
3F8-3FF	Serial Port 1
443	Watchdog timer enable
480-48F	PCI BUS
843/043	Watchdog timer disable

1 st MB Memory Address Map

Memory address	Description
00000-9FFFF	SYSTEM MEMORY
A0000-BFFFF	VGA BUFFER
C0000-CFFFF	VGA BIOS
E0000-FFFFF	SYSTEM BIOS
100000	EXTEND MEMORY

IRQ Mapping Chart

IRQ0	System Timer	IRQ8	RTC CMOS clock
IRQ1	Keyboard	IRQ9	ACPI STEERING
IRQ2	IRQ Controller	IRQ10	COM4
IRQ3	COM2	IRQ11	COM3
IRQ4	COM1	IRQ12	PS/2 mouse
IRQ5	USB	IRQ13	FPU
IRQ6	FDC	IRQ14	Primary IDE
IRQ7	Printer	IRQ15	Secondary IDE

DMA Channel Assignment

Channel	Function
0	Available
1	Available
2	Floppy disk
3	Available
4	Cascade for DMA controller 1
5	Available
6	Available
7	Available

Appendix C: How to use Wake-Up Function

NOVA-EDEN/C3 provides two kinds of Wake-up function. This page describes how to use Modem Wake-Up and LAN Wake-Up functions. Wake-Up function only works with ATX power supply.

- **Wake-Up On Modem(Ring):**
You must set the option **Wake-Up On LAN/Ring** of CMOS SETUP to be enabled. ATX power supply will be switched on when there is a ring signal detected on pin "RI" of serial port.
- **Wake-Up On LAN:**
When your computer is in power-down status, you can see LAN Link/Active LED is flashing. This status indicates that the LAN chip has entered standby mode and waits for Wake-Up signal. You can use other computers to wake up yours by sending ID to it.

ID: ID is the MAC address of your system LAN. Every LAN chip has a factory-set ID, which you can find it from network information in WINDOWS.

ID's format is xxxxxxxxxxxx

Example ID: 009027388320

Appendix D: Digital I/O

One characteristic of digital circuit is its fast response to high or low signal. This kind of response is highly needed for harsh and critical industrial operating environment. That's why we design 4-bit digital inputs and 4-bit digital outputs on the NOVA-EDEN/C3.

There are two kinds of signals (Input and Output) used by the Digital I/O function. These signals are used to control external devices that need On/Off circuit or TTL devices. When one of the signals has been selected, user can read or write data to the system through the Digital I/O function.

A BIOS function call (INT 15H) is used to control the digital I/O:

INT 15H

AH - 6FH
<u>Sub-function:</u>
AL - 8 : Set the Digital port as INPUT
AL : Digital I/O input value

Example program:

```
MOV AX, 6F08H ;setting the Digital port is input
INT 15H ;
```

AL low byte = value

AH - 6FH
<u>Sub-function:</u>
AL - 9 : Set the Digital port as OUTPUT
BL : Digital I/O output value

Example program:

```
MOV AX, 6F09H ;setting the Digital port is output
MOV BL, 09H ;Digital value is 09H
INT 15H ;
```

Digital Output is 1001b

Appendix E: Signal mapping of LVDS

18bit LVDS mapping table

(R0)	1 st LVDS (data0 output -) (data0 output +)	(B2)	1 st LVDS (data2 output -) (data2 output +)

Appendix F: ATX Power Supply

The following notes show how to connect ATX Power Supply

1. Disconnect the AC cord of the Power Supply from the AC source to prevent sudden electric surge to the board.
2. Check the type of your CPU board. All CPU board listed on the next page support ATX power supply but has two types of power switch connection:

- **NOVA-EDEN/C3 (through Power Button & GND):**

Connect the ATX power button switch to the CN9 (power button). And connect the power cable from ATX Power supply to CN11 of CPU card.

If you want to turn ON the system, just press the button once. And if you want to turn off the power supply, please press the ATX power switch button down for about 4 seconds.
